Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 8, 14 and 18 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Imanari et al.

The lens body tube 1 of Imanari et al meets the claimed “optical member”. The claimed “operating ring” is met by distance ring 115. The claimed “switching mechanism” is met by solenoid 114. The claimed “control means” is met by CPU 110. Imanari et al. operates to switch the drive from motor 112 to distance ring 115 when rotation detector 116 detects manual rotation of distance ring 115.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Imanari et al.

Imanari et al. differs from the claimed invention in that only the focus of the lens is controlled.

Zoom lenses are well known in the photography art. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to control the zoom function of Imanari et al. One would have been motivated to modify Imanari et al. to include manual and

Art Unit: 2851

automatic control of a zoom function of the lens in order to expand the range of situations in which the lens could be used by allowing the photographer to control the magnification.

Allowable Subject Matter

Claims 2-7, 10-13 and 15-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art does not disclose or suggest controlling the switching from automatic to manual in the manner set forth in these claims in combination with the remaining claim elements.
